PROGRAMS

PROGRAM

DEFINITION

Pots and pans/Sani	Two prewashes, main wash, three rinses* and drying.
Super	Two prewashes, main wash, two rinses* and drying.
Normal	Two prewashes, main wash, two rinses* and drying.
Light	One prewash, main wash, two rinses, drying.
Quick	One short prewash, short main wash, two rinses.
Rinse & hold	One rinse without heat at 131°F (55°C). If Heat fan dry is selected, the heating element will activate. Drying: 158°F (70°C)
Plate warm	Activates the heating element.

* The Pots and Pans/Sani, Super and Normal programs can be programmed for an extra rinse (see page 4). In that case, the temperatures for the next-to-last rinse would be the household water temperature and the final rinse would be the last rinse temperature indicated in the table on page 3.

OPTIONS

Time Delay	Each press of this touchpad delays the start by one hour, up to 12 hours. The number of hours is displayed in the LED window. After you select the hours, press Start. To cancel, press the Delay touchpad until the LED displays zero then press Start.
Economy	When used with low temperature settings, saves energy by extending the wash time.
Heat Dry	Activates the fan for an additional 30 minutes after the drying cycle to cool the dishes.
Fan Cool	Pressing this touchpad activates the heating element for 12 minutes after the final rinse. (158° F/70° C)
Temp Select	Lets you select the water temperature for the wash programs (except Rinse.) The indicator light glows when it's on the High setting and remains off when set on Low. The LED displays the temperatures in Celsius. Refer to the table on the next page for the temperature options and conversions to Fahrenheit.
Start/Stop	Press this touchpad to Start or Stop the machine. To interrupt a program, hold this touchpad down for three seconds.

WASH PROGRAM TEMPERATURES

Wash Program	Temp Options	1st Prewash	2nd Prewash	Main Wash	1st Rinse	2nd Rinse	Final Rinse
Pots & Pans/Sani*	131°F (55°C)	113°F (45°C)	House	131°F (55°C)	House	House	131°F (55°C)
	149°F (65°C)	113°F (45°C)	House	149°F (65°C)	House	House	149°F (65°C)
	158°F (70°C)	113°F (45°C)	House	158°F (70°C)	House	House	149°F (65°C)
	167°F (75°C)	113°F (45°C)	House	167°F (75°C)	House	House	149°F (65°C)
Super *	131°F (55°C)	113°F (45°C)	House	131°F (55°C)	House	131°F (55°C)	n/a
	149°F (65°C)	113°F (45°C)	House	149°F (65°C)	House	149°F (65°C)	n/a
	158°F (70°C)	113°F (45°C)	House	158°F (70°C)	House	149°F (65°C)	n/a
	167°F (75°C)	113°F (45°C)	House	167°F (75°C)	House	149°F (65°C)	n/a
Normal*	131°F (55°C)	86°F (30°C)	House	131°F (55°C)	House	131°F (55°C)	n/a
	149°F (65°C)	86°F (30°C)	House	149°F (65°C)	House	149°F (65°C)	n/a
	158°F (70°C)	86°F (30°C)	House	158°F (70°C)	House	149°F (65°C)	n/a
	167°F (75°C)	86 (30°C)	House	167°F (75°C)	House	149°F (65°C)	n/a
Light	113°F (45°C)	House	n/a	113°F (45°C)	House	113°F (45°C)	n/a
	131°F (55°C)	House	n/a	131°F (55°C)	House	131°F (55°C)	n/a
	149°F (65°C)	House	n/a	149°F (65°C)	House	149°F (65°C)	n/a
Quick	113°F (45°C)	House	n/a	113°F (45°C)	House	113°F (45°C)	n/a
	131°F (55°C)	House	n/a	131°F (55°C)	House	131°F (55°C)	n/a
	149°F (65°C)	House	n/a	149°F (65°C)	House	149°F (65°C)	n/a

* The Pots and Pans/Sani, Super and Normal programs can be programmed for an extra rinse (see page 4). In that case, the temperatures for the next-to-last rinse would be the household water temperature and the final rinse would be the last rinse temperature indicated above.

S = Pushbutton switch

L = Indicator light

EXTENDING FAN COOLING TIME

To extend the fan cooling time, **press S1 five times then press** one of the following:

- S5** for 30 extra minutes
- S4** for normal fan cooling time

SETTING AN EXTRA RINSE

To add an extra rinse to the Pots and Pans, Super, Normal and Light wash programs, **press S2 five times then press** one of the following:

- S5** for an extra rinse
- S4** for the normal number of rinses

SETTING CHILD-SAFE START FUNCTION

The start function can be reprogrammed so that the Start button must be pressed in for 3 seconds to start the programs. To do this, **press S4 five times then press** one of the following:

- S5** to get a prolonged start function or
- S4** to get a normal start function.

SETTING PUMP-OUT TIME

If it's necessary to reprogram the pump-out time, you can do so by **pressing S3 five times then pressing** one of the following:

Press:	to get an outlet time of:
S3	20 seconds
S4	25 seconds (factory setting)
S5	35 seconds
S6	45 seconds
S7	85 seconds

SETTING INLET TIME

You can reprogram the inlet time on level controlled and time controlled inlets. To do this, **press S5 five times then press** one of the following:

Press:	to get an inlet time of:
S3	45 seconds (factory setting)
S4	56 seconds
S5	68 seconds
S6	90 seconds
S7	113 seconds
S8	180 seconds

S = Pushbutton switch

L = Indicator light

FAULT CODES

Blinking lights and an F-code in the LED window indicate a machine fault.

Code	Blinking Lights	Problem
F1	L3 and L7	Heating element
F2	L1-L8	Overfill
F3	L4 and L5	Thermistor fault (heater control)
F4	L1-L4	Water inlet

FAULT-TRACING PROGRAM

The functions of the electrical components can be tested by **pressing S6 five times then pressing** one of the following:

Press	to test
S2	inlet valve 2
S3	inlet valve 1
S4	combi-dispenser
S5	heating element
S6	circulation pump
S7	outlet pump
S8	fan motor and wax motor

Stop the fault-tracing program by pressing S13.

LINKS ON THE PROCESSOR BOARD (for program variations)

These diodes should be cut for proper U.S. installation:

- Link 955: DW955, processor board layout
- Link USA: USA processor board layout

CONTROL PANEL (see page 17)

The control panel contains a microprocessor for control of programs, circulation pump, inlet valves, etc. It also allows for custom settings of programs (see page 3).

CIRCULATION PUMP/MOTOR (see page 19)

The circulation pump/motor consists of a synchronous motor and pump, constructed in an integrated unit. A 16 μ F capacitor is fitted to the circulation motor/pump.

OUTLET PUMP (see page 19)

The outlet pump consists of a synchronous motor and pump, constructed in an integrated unit.

INLET VALVE (see page 19)

A safety-unit type: Two solenoids and valve seats are independently connected to a unit.

HEATING ELEMENT (see page 13)

1400 Watt

THERMISTOR (see page 13)

The thermistor controls the water temperature within $\pm 1^{\circ}\text{C}$ (2.5°F) to give the required temperature. The heater will be disconnected if the thermistor is short-circuited or loosened from the circuit board and the fault code "F3" displays in the LED window. The normal resistance of the thermistor is between 25 and 15K ohm at 68°F (20°C) or 86°F (30°C) alternately.

OVERHEAT PROTECTION (see page 13)

The thermostat has a switch-off function at 190°F (88°C) that prevents the heating element from staying on if the control unit or the timer should fail.

DOOR SWITCH (see page 19)

A microswitch senses that the door has been opened. This interrupts the program and cuts the power to all control components (motor, valves, etc.).

LEVEL SWITCH (PRESSURE SWITCH) (see page 13)

This switch protects against overfilling by interrupting the power to the inlet valve and starting the outlet pump. If the water level has not dropped within 30 seconds or if overfill has occurred twice during the same program, the program will be terminated and a fault code displays. The overfill protection operates during all programs, including fault-tracing, even if the microprocessor is faulty.

OVERFILL SWITCH (see page 13)

A float in the base pan influences a microswitch that disconnects the inlet valve and starts the outlet pump.

COMBI-DISPENSER (see page 15)

The combi-dispenser dispenses both detergent and rinse aid. The dispenser has an adjustable volume chamber for setting the desired amount of rinse aid.

TURBO FAN (see page 15)

The turbo fan vacuates the moist air from the machine during the drying phase of the program. The fan system consists of a fan motor that runs a two-part impeller. Dry, cool air is pulled in from the door into one of the impeller halves. A wax motor opens a damper and the moist air is pulled into the other part of the impeller. The dry, cool air and warm, moist air mix and condense in the condensation chamber. The condensed moisture then drains through the channel to the lower sump area. Dry air is then vented out through a channel below the outer door.

Electrical Supply

The machines are wired for connection to a single-phase, 120V, 15A supply, with a heater power of 1400W, giving a total power requirement of 1600W.

VALUES FOR WIRING DIAGRAMS

Resistance values at 68° F (+/-5°F), 20° C (+/-3°C)

(Values within +/- 10% is normal.)

AP	Drain pump	120V, 60 Hz, 25.5 ohm
BB	Illumination switch	
CP	Main pump	120 V, 60 Hz, Main = 10.5 ohm, Aux = 14.5 ohm
KD	Combi-dispenser	120 V, 0.31 ohm
EL	Heating element	120 V, 1400 W, 10 ohm
F	Filter	680 K ohm (1-2, 3-4)
M	Inlet valve	120 V, 9.93 K ohm
FL	Fan	120 V, 0.25 K ohm
LB	Door switch	
LU	Door	
N	Level switch	
P	Control unit	
R	Relay	230 V Eberle, 0.59 K ohm
T	Thermostat	19–25 K ohm
TB	Pushbutton switch	
TE	Temp. thermistor	18–25 K ohm
WAX	Wax motor	1.5–3.0 K ohm
VMG	Rinse ag sensor	
OB	Overflow switch	

The lists below define the meanings of the dashed numbers or letters following a part number:

Colors:

- 0 White
- 29 Black, bright
- 33 Black
- 36 Dark grey
- 49 Helios grey
- 69 black, metallic
- 77 grey
- 81 metallic
- 95 Stainless Steel

Note: Not all colors are available for all parts.

Doors

- M for units with fan
- P for integrated units
- R for decor frames, long deviation
- S for decor frames, short deviation
- T for decor frames with adjustable lower part

TOPIC: DOOR SPRINGS

There are three different sets of door springs, as defined below:

Part Number	Machine	Weight Capacity	Color Coding
80 584 91-77	For all standard machines	9 lbs.	none
80 602 32-77	For integrated and fully-integrated machines	12 lbs.	yellow
80 713 23-77	Heavy-duty for wooden panels, available as accessory part	22 lbs.	red

Color code

TOPIC: WATER LEVEL

Switch level transferred to measuring points on the coil arm bearing.

Timer-controlled machines

Water flow inlet valve = 3.8 +/- 5% ltr / min

Intake time = 60 seconds

- Max. tol. 3.8 +5% = 3.9 ltr +3 mm
- Max. tol. 3.8 +/- 5% = 3.9 ltr +2 mm
- Max. tol. 3.8 -5% = 3.9 ltr +1 mm

Electronic machines

Water flow inlet valve = 3.8 +/- 5% ltr / min

Intake time = 57 seconds

- Max. tol. 3.8 +5% = 3.7 ltr +1 mm
- Max. tol. 3.8 +/- 5% = 3.51 ltr +0 mm
- Max. tol. 3.8 -5% = 3.3 ltr -1 mm

Note: Start with dry bottom well, which gives a 2mm lower level.

TOPIC: GUIDE PIN FOR DOOR LOCK

Occasionally, the guide pin for the door lock may freeze or become stuck, causing the machine not to stop when the door is opened. To prevent this, you can lubricate the guide pin with petroleum jelly.

TOPIC: CONTROL UNIT FAILURE ANALYSIS

To prevent repeated exchanges of control units due to failures in auxiliary components (circulation pumps, inlet valves, etc.), a simple check on the control unit should be done to determine what cause the failure.

If any of the control unit components listed below or the conductive pattern (copper foil on the soldering side) near these components are damaged, most likely the external component caused the failure and should be ohm-measured. In the case of short-circuits, the components should be exchanged along with the control unit.

External Component	Associated Output Components
Heater	K1, PF2
Drain pump	K2, P1 5
Circulation pump	K3, P1 3
Inlet valve 1	Q13, R36, R52, D22, D24, P1 7
Inlet valve 2	Q6, R43, R55, D26, D27, P1 8
Combi-dispenser	Q12, R50, R58, D21, D23, P2 3
Fan and wax motor	Q16, R46, R56, D18, D19, P3 3
Interior light	P4 3 (after 9740, the lamp is not connected to the control unit.)

K=Relay
Q=Triac
R=Resistor
D=Diode
P=Connector

Note: Once the wax motor has dried out, it is not possible to measure for faults. Remove the wax motor and check for burn marks. For complete certainty, replace the wax motor.

TOPIC: REMAINING TIME INDICATION

Dishwashers with an LED window show how much time remains for the program to run. This is calculated on the assumption that the incoming water is at a temperature of 141°F (60°C).

If the machine is connected to a cold water supply, the time display for the remaining time will be incorrect the first time each program is run. On subsequent runs of the respective programs, the machine will calculate the time based on how long the program took on the previous run.

Remaining time displays in the LED window.
